1 If you are using Virtio

The following will work if you have a **virtual server** (KVM-Linux) using **virtio** with the operating system installed on the first storage device:

Code

1. `sudo grub-install /dev/vda`
2. `sudo update-grub`

2 If you are not using virtio

The following will work if you have a **dedicated server** (or in case you are not using virtio) with the operating system installed on the first storage device:

Code

1. `sudo grub-install /dev/sda`
2. `sudo update-grub`

It is now fixed. You shouldn't see that message anymore in the following reboots.
